Ilias Giannopoulos, Fixers

The Fixers are a group of people who seek to promote the open-source philosophy, creativity and solidarity. They share their know-how in the spheres of science and technology, providing a creative space in which people can familiarize themselves with hi-tech and see for themselves that technology is more a creative tool than a medium for consumption. Determined to show that high tech is the right of the many rather than a preserve of the few, the Fixers created a space dedicated in the main to 3D printing, where they print their own and others' work. In parallel, they research 3D printer and scanner design, building their own machines for scanning and printing three-dimensional objects.

The public can attend workshops in this space where the Fixers will help them to build their own 3D printer, thereby gaining entry to a creative new technology with limitless applications. Ilias Giannopoulos, Arion Memos, Dimitris Grapsas, Tasos Avgoustidis, Lina Kontiani.

Iraklis Agiovlasis

Iraklis Agiovlasis holds a Ph.D. in Chemical Engineering from the National Technical University of Athens and has done academic and research work in the fields of Information Systems, Organizational Change and Management. Currently focused on supporting entrepreneurship, innovation and digital technologies, he is active on the European technology transfer and start-up scene. Since 2000, he has worked as a funding consultant with companies and public institutions focusing on ICT, cultural research and development projects. He has an impressive track record when it comes to securing funding for SMEs and startups. An Innovation Management consultant at the National Documentation Center (EKT/NHRF) since 2014, he is also the National Contact Point for Horizon 2020 and continues to provide coaching and mentoring to innovative SMEs as a freelance consultant.

Nasos Drosopoulos

Nasos (Athanasios) Drosopoulos is a senior researcher at the National Technical University of Athens (NTUA). He received his degree in Computer Science from the University of Ioannina, Greece, and his Ph.D. in the field of computer vision from the School of Electrical and Computer Engineering (ECE) at the NTUA. His focus over the past ten years has been on cultural heritage IT standards and interoperability, aggregation repositories, and data infrastructures and web services that facilitate content publication and reuse.

He is a member of the Image, Video and Multimedia Systems Laboratory (IVML) at the NTUA, coordinating R&D activities in the areas of neural networks & machine learning, human-computer interaction, knowledge technologies and digital archives. He has participated in over 30 Greek and EC projects and is currently involved in initiatives for the development and use of the Europeana collections, and projects concerning metadata modelling and aggregation, digital heritage access and interoperability, and semantic web technologies.

Dimitris Koukoulakis

Dimitris Koukoulakis received his degree in IT Engineering from the University of Surrey, spending time at the ITE as part of his course.

He worked in the R&D department at NOKIA UK for two years, and developed software for integrated IPTV systems in Greece for eight.

Over the last two years, he has been involved with open technologies including Arduino and Raspberry Pi and with 3D printing.

A co-founder and co-organizer of the CommonsFest in Herakleion since 2013, he is currently involved in setting up CommonsLab, a new initiative aimed at developing open source software and hardware.
